

## Jeetkumar Ratanpara

📍 **Home** : 901 Shilpan ONYX, Wing-B/3, Gangotri Park, Opp. BT Savani Kidney Hospital, 360005, Rajkot, India

✉ **Email**: [jeetratanpara2003@gmail.com](mailto:jeetratanpara2003@gmail.com) 📞 **Phone**: (+33) 743686809

🌐 **LinkedIn**: [Jeet Ratanpara](#)

**Date of birth**: 28/03/2003 **Place of birth**: Rajkot **Nationality**: Indian

### ABOUT ME

MSc Information Technology student at Epitech Paris with a strong foundation in IoT, full-stack software engineering and DevOps practices. Experienced in building complete systems from embedded hardware (Arduino, ESP8266) to cloud-deployed APIs (Python, FastAPI, Docker). International profile with professional English (C1) and a proactive, team-oriented mindset.

### WORK EXPERIENCE

#### **BrainyBeam Info-Tech Pvt. Ltd**

**City**: Ahmedabad | **Country**: India

[ 27/05/2024 – 25/06/2024 ] **MERN Stack Developer (Internship)**

I successfully completed an internship focused on Web Design, where I had the opportunity to work extensively with React JS.

During this experience, I honed my skills in creating dynamic and visually appealing user interfaces, collaborating with a team to bring innovative designs to life while gaining valuable insights into responsive design principles and front-end development techniques.

#### **Cygner Technolabs Pvt. Ltd.**

**City**: Rajkot | **Country**: India

[ 28/05/2023 – 28/06/2023 ] **Frontend Developer (Training)**

I engaged in web development for a project titled 'Knot, ' utilizing my skills in PHP, CSS, and JavaScript (specifically jQuery).

The project involved creating a dynamic and user-friendly interface, where I focused on enhancing the visual appeal and functionality through effective styling and interactive elements.

### EDUCATION AND TRAINING

[ 07/2021 – 04/2025 ] **Bachelor of Technology (Computer Engineering)**

#### **Marwadi University**

**City**: Rajkot | **Country**: India | **Final grade**: 6.62 CGPA

[ 06/2020 – 05/2021 ] **12th Grade (GSEB)**

#### **Premier School**

**City**: Rajkot | **Country**: India | **Final grade**: 83%

[ 06/2018 – 05/2019 ] **10th Grade (GSEB)**

#### **Atmiya School**

**City**: Rajkot | **Country**: India | **Final grade**: 73.6%

### LANGUAGE SKILLS

**Mother tongue(s)**: Gujarati , Hindi

**Other language(s):**

**English**

**LISTENING** B2 **READING** B2 **WRITING** B2

**SPOKEN PRODUCTION** B2 **SPOKEN INTERACTION** B2

**French**

**LISTENING** A2 **READING** A2 **WRITING** A2

**SPOKEN PRODUCTION** A2 **SPOKEN INTERACTION** A2

*Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user*

**SKILLS**

Arduino mikrokontroleru programmēšana (Arduino Uno, Arduino Nano) | JavaScript | C language | UI/UX | HTML | CSS | MERN | Python | SQL | C++ | assemble sensors | Serial communication | ASP.NET Core REST API | Hardware debugging | deploy cloud resource | Python (computer programming) | use access control software | PostgreSQL | software UI design patterns | Recharts | process payments | identify nutritional properties of food | Github, Github actions | Docker & docker-compose | clear pipelines | machine learning | software components libraries | Good knowledge in the field of programming: Matlab, Python(Tensorflow, Keras) | Phoenix framework | TypeScript | cloud technologies | AWS ECR | GCP, AWS-S3, AWS-EC2, AWS-Lambda

**Communication and Interpersonal Skills**

Empathy | Leadership | Problem Solving | Teamwork | Time Management | Adaptability

**PROJECTS**

**Techarainfoway**

- Language: React JS
- Built a responsive website for a tech company using React.js, focusing on interactive features and smooth navigation to improve user engagement.

[ 22/09/2025 – 12/10/2025 ]

**Time Manager — Role-Based Employee Time Tracking Platform**

**React 18 · TypeScript · Vue 3 · Elixir/Phoenix · PostgreSQL · JWT Auth · Docker · Cordova iOS**

- Built a full-stack monorepo with a Phoenix/Elixir REST API backend featuring JWT access/refresh token authentication, role-based access control (employee, manager, general\_manager) and full CRUD for users and working time records.
- Developed a Vue 3 frontend with role-specific dashboards, clock in/out tracking, break management, analytics views and CSV export functionality connected to the live API.
- Architected a React 18 + TypeScript prototype dashboard with Recharts data visualisation and Radix UI components for role-switchable UI iteration.
- Configured full-stack Docker Compose orchestration with PostgreSQL, Phoenix API and Vue frontend services; implemented CORS handling and environment-based configuration.
- Wrapped the Vue build into a Cordova iOS mobile application enabling cross-platform deployment from a single codebase.

[ 20/10/2025 – 30/11/2025 ]

**Spoontacular — Full-Stack Meal Planning Application with DevOps Pipeline**

**React · Node.js/Express · PostgreSQL · Docker · Kubernetes · GitLab CI/CD · GitHub Actions · Spoonacular API**

- Built a full-stack meal planning application with React frontend and Express.js REST API backend, featuring JWT user authentication, onboarding preference stepper and dynamic meal plan generation using the Spoonacular API.
- Designed and managed PostgreSQL database schema for user profiles, preferences and meal plan data with complete backend API integration.
- Containerized the full application using Docker and Docker Compose for consistent multi-service local and production environments.

- Deployed application to Kubernetes cluster using custom manifests for scalable, production-grade orchestration.
- Implemented multi-branch CI/CD strategy using GitLab CI/CD and GitHub Actions — automated sanity tests on development, integration tests on staging and regression tests on production branch.

[ 26/01/2026 – 22/03/2026 ]

### **MarchéGo — Full-Stack E-Commerce Platform for Local Farmers Markets**

**Python · FastAPI · React 18 · Flutter · PostgreSQL · Docker · GitHub Actions · Railway · AWS EC2**

- Built a full-stack e-commerce platform with a FastAPI/Python REST API backend featuring JWT authentication, role-based access control (admin/customer), SQLAlchemy ORM, and complete CRUD for products, orders, inventory and users.
- Integrated QR/barcode scanning with Open Food Facts API for automatic nutrition facts, Nutri-Score and NOVA group classification; implemented PayPal sandbox payment integration and invoice generation.
- Developed a React 18 frontend with Radix UI, Tailwind CSS and Recharts for real-time admin dashboard, KPI reports, sales analytics and customer shopping portal with cart and favourites.
- Built a Flutter mobile application for iOS and Android with camera-based barcode scanning, Provider state management and Dio HTTP client connected to the live API.
- Deployed full stack on Railway and AWS EC2 using Docker Compose orchestration; configured GitHub Actions CI/CD pipeline with multi-branch strategy and GitLab-to-GitHub repository mirroring.

Link: <https://gitlab.com/TejuReddy/marchego.git>

[ 02/02/2026 – 29/03/2026 ]

### **Cleaning Gotham — End-to-End IoT Smart Waste Management System**

**Arduino UNO · ESP8266 · Python · .NET ASP.NET Core · REST API · PostgreSQL · Railway · Unity AR**

- Designed and built complete IoT pipeline: ultrasonic, LDR and water sensors → ESP8266 WiFi → HTTP REST API → PostgreSQL → real-time monitoring dashboard.
- Debugged ESP8266 hardware power instability using capacitor filtering; resolved TCP proxy, HTTP routing and serial buffer management issues.
- Deployed .NET ASP.NET Core REST API on Railway with PostgreSQL for real-time IoT data ingestion, storage and retrieval.
- Generated ARUco markers for Unity AR mobile frontend enabling augmented reality bin visualisation.

Link: <https://github.com/Tejaswini3107/KM.git>

[ 30/03/2026 – 24/05/2026 ]

### **Zoidberg 2.0 — Pneumonia Detection from Chest X-Ray Images**

**Python · Scikit-learn · TensorFlow/Keras · Pandas · NumPy · PCA · SVM · CNN · Joblib**

- Built a full machine learning pipeline for binary and 3-class pneumonia detection on 5,216 chest X-ray images — preprocessing grayscale conversion, 128×128 resize, StandardScaler normalization and PCA dimensionality reduction to 100 components retaining 87.88% variance.
- Trained and benchmarked 5 model architectures (Logistic Regression, Random Forest, MLP, SVM RBF, KNN) across 3 evaluation splits including stratified 80/20, official train/val/test and 5-fold StratifiedKFold cross-validation — best result: SVM ROC-AUC 0.9952.
- Developed a CNN model on raw 64×64 grayscale pixels using TensorFlow/Keras for both binary and 3-class classification (Normal / Bacteria / Virus pneumonia).
- Exported all trained models as Joblib and Keras files with a reusable inference pipeline enabling single-image prediction with confidence scoring on new X-ray images.
- Generated a full synthesis PDF report, HTML notebook export, confusion matrices and performance plots for all models across all splits.

Link: <https://github.com/JeetRatanpara28/Zoidberg2.0.git>

[ 06/04/2026 – 31/05/2026 ] **CIA — Full-Stack Inventory Management Platform**

**Node.js · Express · TypeScript · React · Redux · MySQL · TypeORM · JWT · Docker · GitHub Actions · AWS ECR · EC2**

- Built a full-stack inventory management platform with a Node.js/Express/TypeScript REST API backend featuring JWT authentication (HS256, 15-min expiry), bcrypt password hashing (cost 12), role-based access control (admin/user) and complete CRUD for users, products and orders.
- Developed a React/Redux/TypeScript frontend with Bootstrap 4 and Axios for product management, order placement and admin user management, connected to the live Express API.
- Implemented production-grade security including rate limiting on auth routes (10 req/min per IP), Helmet headers, CORS whitelisting, non-root Docker containers and admin account deletion safeguards.
- Configured Docker Compose orchestration for backend, frontend and MySQL services with TypeORM migrations and automatic admin account seeding on first run.
- Built a GitHub Actions CI/CD pipeline on push to main — type-checking, Docker image build and push to Amazon ECR, and automated deployment to AWS EC2 via SSH using docker compose pull and up.

Link: <https://github.com/JeetRatanpara28/cia-epitech.git>

[ 19/01/2026 – Current ] **AgriSense AI — AI-Powered Agricultural Advisory Platform (Ongoing)**

**Python · FastAPI · PostgreSQL · Scikit-learn · XGBoost · TensorFlow/LSTM · Docker · NASA POWER API · AWS EC2**

- Architecting and developing a full-stack AI agricultural advisory platform for South Asian smallholder farmers — providing real-time pest risk assessment, irrigation recommendations, climate risk analysis and crop recommendations via REST API endpoints.
- Designed PostgreSQL database schema and FastAPI backend architecture with Pydantic request/response models, Swagger documentation and farmer profile management CRUD endpoints.
- Integrated Random Forest pest risk prediction models (86.59% accuracy) trained on 36,162 rows of 11-year NASA POWER weather data — exposing confidence scores and pest type classification (stem borer, aphids, whitefly, bollworm) via REST API.
- Integrated XGBoost irrigation decision classifier (99.78% accuracy) and water amount regressor ( $R^2$  0.75, MAE 4.87mm) built on FAO-56 international crop water requirement standards for rice, wheat, cotton and sugarcane.
- Built and managing CI/CD pipeline with GitHub Actions for automated testing and deployment to AWS EC2; configured Docker containerisation and multi-environment infrastructure for the full platform.
